SUMMARY

Backend Software Engineer with end-to-end ownership of SWIFT ISO 20022 payment pipelines at StoneX. Designed the Funding as a Service (FAAS) platform spanning legacy MT and modern MX formats. Built multi-agent LLM systems and real-time distributed platforms. Competitive programmer — ICPC Regionals, Google Kickstart Global Rank 1596.

TECHNICAL SKILLS

Languages: Java, Python, TypeScript, JavaScript, SQL, C++

Frameworks & DBs: Spring Boot (Security, WebSocket, Cloud Gateway), FastAPI, Node.js, React, Next.js 14 · MongoDB, PostgreSQL, Redis, MySQL

AI / Infra: LangChain, LangGraph, Google Gemini, TA-Lib, scikit-learn · Docker, Kafka, Azure DevOps, GitHub Actions, CI/CD

Domain: SWIFT ISO 20022 · pacs.008/009 · pain.001 · CAMT.053/054 · MT900/910/942 · Microservices · System Design · Secure Coding

PROFESSIONAL EXPERIENCE

Software Engineer II — StoneX Group, Pune, IN

Aug 2024 - Present

- Designed and own end-to-end the Funding as a Service (FAAS) pipeline — centralized payment platform for all StoneX entities: ingesting TMSjson payloads from Treasury Management Systems, generating ISO 20022 messages (pacs.008, pacs.009, pain.001), and delivering to the SWIFT network with full ACK/NACK lifecycle management.
- Built SWIFT message processing layer supporting 7+ message types across legacy MT (MT900, MT910, MT942) and modern MX (CAMT.053, CAMT.054); co-drove XPAY to production (Feb 2025) — an internal payment platform processing requests from the client-facing CONNECT app and direct broker/ops initiations, enabling \$600M in operational savings.
- Proposed AI cost-reduction architecture using GraphDB + VectorDB + MCP with CI/CD automation to eliminate redundant LLM token consumption in code-data sync workflows.
- Led team to 2nd place at StoneX India Hackathon (Nov 2025) — built an AI ops tool that auto-summarizes investigation cases with key messages, timelines, and next actions; multilingual chatbot and interactive dashboard for operations users.

Software Engineering Intern — StoneX Group, Pune, IN

Jan 2024 - Jul 2024

- Core contributor to XPAY, an internal payment platform processing cross-border transactions from the client-facing CONNECT app and direct broker/ops initiations — built Spring Boot REST APIs, transaction logic, compliance hooks, and audit trails forming the foundation of its production architecture.
- Delivered production-grade CI/CD pipelines on Azure DevOps with DevOps and InfoSec teams; aligned platform against regulatory compliance standards ahead of go-live.

PROJECTS

NeoTrade AI — Multi-Agent Stock Analysis Platform

Python · FastAPI · LangGraph · Redis · MongoDB · Gemini Pro | github.com/kushgarg132/AI_Stock_Investor

- Architected a multi-agent financial analysis system using LangGraph orchestrating 5 specialized agents (Master, Analyst, Quant, Risk, Chat); built async FastAPI backend with Redis pub/sub caching for real-time portfolio updates.
- Integrated Google Gemini Pro LLM with prompt engineering for sentiment analysis; TA-Lib pipeline (RSI, MACD, Bollinger Bands); full pytest coverage; deployed via Docker Compose on Render + Vercel.

Betrix — Real-Time Multiplayer Poker Platform

Java · Spring Boot 3.4 · MongoDB · WebSocket · Spring Security · React | github.com/kushgarg132/Betrix [Live]

- Built full-stack multiplayer poker platform with WebSocket real-time game state sync; engineered stateful poker logic — hand evaluation, pot calculation, side-pot handling, dealer rotation.

- Designed wallet engine with atomic transaction management; JWT auth via Spring Security; deployed live on Render + Firebase with Vite-optimised frontend.

EDUCATION

B.Tech in Computer Science (AI/ML Specialization) —
Symbiosis Institute of Technology, Pune

Aug 2020 – Sep 2024

ACHIEVEMENTS

Global Rank 1596 · Google Kickstart 2021 Round B — Top competitive programming rank among thousands of global participants.

ICPC Asia Kanpur Regionals (2021-2022) — Qualified as part of Team Volatile Voids in the world's most prestigious collegiate programming contest.
